11. TOXICOLOGICAL INFORMATION

Acute Toxicity

All components have a low order of acute toxicity. All components have oral LD50s (rat) greater than 10000mg/kg. In dermal toxicity studies, this product was not found to be a primary skin irritant when applied to rabbit skin for 24 or 48 hours.

Chronic Toxicity/Carcinogenicity

Stearyl Alcohol: When implanted in mice (1000 mg/kg) caused an increased incidence of tumors in the kidney, ureter and bladder.

Genotoxicity

Propylene Glycol: DNA inhibition (mouse-subcutaneous); cytogenetic analysis (mouse-subcutaneous; hamster-fibroblast).

Silver Sulfadiazine: DNA damage, unscheduled DNA synthesis and DNA inhibition (microorganisms).

Reproductive/Developmental Toxicity

Propylene Glycol: Intraperitoneal injections (100 mg/kg) to mice during pregnancy resulted in an increase in post-implantation mortality and fetotoxicity.

Silver Sulfadiazine: Subcutaneous administration to rats prior to pregnancy (11 gm/kg) resulted in an increase in pre- and post-implantation mortality and decreased litter size. When given subcutaneously to rats (11 gm/kg) and rabbits (26-65 gm/kg) during pregnancy, caused developmental abnormalities of the musculoskeletal system and decreased viability of newborns.
